

Stowe and Bibury Field Shelters

Reeves field shelters offer peace of mind for you and shelter from the elements for your field bound friends!

Combining quality and durability our field shelters offer excellent protection during the hot summer months when flies and midges are prevalent and an ideal shelter from the cold wind and rain in winter.

Our flexible designs mean we can accommodate small herd animals including Miniature Shetlands, Alpacas, Goats, Rare Breed Sheep, Miniature Donkeys, Dexter Cattle etc. and Ponies, Horses, Llamas etc.

Reeves offer two types of field shelter, The Stowe and The Bibury.

The Stowe field shelter has a pent style roof and the Bibury field shelter has an apex roof. Both are offered in a range of sizes, starting with the popular 3m deep x 3.6m wide. All shelters have standard 1.8m front openings or double openings if required.

The solid, heavy, galvanized steel frame, on which the field shelter stands, provides stability in high winds and confidence during towing. The skids are galvanized steel.

Black Onduline is used as our standard roofing material and fastened with joists onto roof struts constructed out of 4" x 2" tanalised sawn timber.

You can tow the shelter around your paddock, from field to field when resting paddocks helping maintain grazing conditions.
