

# Galvanised Runs – Professional

Our run sections are manufactured using only the highest quality materials by our own craftsmen.

The steel run sections are welded with the latest MIG welding equipment and constructed from 25mm x 25mm x 2mm welded RHS steel, gate corners are mitred for a stronger, professional finish, all sections are vented then hot dip galvanized inside and out for a durable, maintenance free finish. All gated sections have spring bolts and a padlock facility.

In addition to the hot dipped galvanising on our runs we provide a professional, architecturally finished, powder coating service available in a variety of colours. Locinox locks are available for extra security.

Bar runs are constructed from solid round bar at 8cm centres, 5cm centres are available on request. Heavy duty 10g 2" mesh is used as standard although 8g is available as an option if required.

We can manufacture all our run sections to customer specifications.

Standard and customised sizes

Mitred corners for a professional finish

Maintenance free finish

Spring bolts and padlock facility

Welded steel run sections

Adjustable feet

Solid bar or 10g weldmesh

Powder coating available

Hot Dip Galvanising inside & out

25 x 25 x 2mm box section frame

Can be made to customer specifications

1854mm or 1500mm high

## PRICE LIST
