

The Woodstock Kennel Range

The Reeves Woodstock kennel range is a practical solution for both working and domestic dogs.

All Woodstock kennels are produced using high quality prepared 50mm x 50mm tanalised timber. Cladding is a generous 16mm tanalised shiplap to protect from the most severe weather and floor sections are made from tanalised timber for durability.

Prices illustrated are for Woodstock Kennels with a depth of 1.2m, including 2.4m or 1.8m professional quality galvanised mesh or bar runs and gated sections, other lengths are available.

Multiple Woodstock kennel units are available to any size, please telephone for details. We also supply Woodstock kennels without runs.

All kennel areas have a damp proof course and the walls are fully lined and insulated, anti chew strips are fitted to each pop hole and exposed timber edges. Galvanised steel corner strips are fitted as standard to the exterior.

Single or multiple configurations
Available in various combinations
